PRODUCE CUSTOM VIDEO AND MOVIE CREDITS WITH LIGHTNING SPEED
Introducing VideoTagger™: The Only Software Application Designed Specifically To Create
Movie Credits

September 16, 2008 (Hoboken, NJ). ElectricHappiness.com announced today that **VideoTagger™**, an innovative movie credit software application, is available in both premium and free editions at www.ElectricHappiness.com. **VideoTagger™** is the first full-featured software product to enable users to create beginning and end titles for movies and videos. This groundbreaking and easy-to-use product is for any movie or video creator, from seasoned directors to professional video editors to the casual movie enthusiast.

VideoTagger™ is designed to simplify the process of creating movie credits by providing its users with a straightforward interface that allows them to organize their titles into multiple sections with varying appearances. For each section of titles, typically denoted by its title (Cast, Sound Effects, Producers), users have various options to choose from to make unique, one-of-a-kind credits, including:

- Selecting whether the section will roll, or appear as a slide
- Applying an appropriate look and feel from a variety of on-screen layout options
- Choosing type of information to display, choosing from characters roles and names, contributor names only or songs
- Customizing the fonts and font size for each displayable text item
- Selecting whether or not to include a customized image in the section
- Entering the text that will appear on-screen

Every step of the way, an on-screen preview helps to visually define how these settings will appear when they are rendered into a movie. Each section helps users to create credits by providing the user with a clear and concise way to enter and modify the information that appears on screen. In addition, these sections of credits can easily be modified and even reordered. The movie itself can even be rendered to fit a set amount of time. The application's simple interface provides a straightforward easy way to build professional movie credits. With minimal effort professional grade movie titles are instantly produced by using **VideoTagger™**. Whether you are a video editing enthusiast, a film director, or the next "Star Wars Kid" web video star, **VideoTagger™** is the ideal software application to create professional movie credits for your film, giving you the ability to get the credit that you deserve.

Electric Happiness LLC was founded with the goal of providing the first full-featured software product for creating professional movie credits that could be used by anyone from directors and video editors, to the casual movie creator. The premium edition of VideoTagger™ is available

for PC and Macintosh computers, and a free PC edition can be downloaded from ElectricHappiness.com. The first alpha version of VideoTagger™ was released September 16th 2008.
